Enter Notes

Feed Hive   Update

User will first have to Choose a Hive(class) to take notes under. Once chosen, an active state will be set to the ID of that class. Now All notes taken will be under that class. Once the feed hive (submit) button is pressed a check will be called to compare ID's for a match. If match then an insert statement will be applied to the Notes table in the DB filling in the columns for notes under that user. If no match found then user will have to switch Hives(classes)

An Update statement to the row under (notes field) will be made if user goes back into the note, makes changes to the note, and submits via update button

HEADER

User1 notes

User2 notes

User3 notes

When a user chooses a Hive(class) to view notes, a query will be made into the DB retrieving a result set but filtering only username. Resultset wil be displayed in descending order by modified date.

**permissions column in DB under Users table and Notes table will determine the set of notes an user can view.
